

I CLAIM:

1. A hanger support assembly suitable for use with clothes hangers, the hanger support assembly comprising :
 - a frame, said frame having hanger retaining means thereon;
 - a support arm pivotally secured to said frame; and
 - a mounting bracket for mounting said support arm to a substrate.
2. The hanger support assembly of Claim 1 wherein said mounting bracket is pivotally connected to said support arm such that said support arm may move between first and second positions.
3. The hanger support assembly of Claim 2 further including means for retaining said support arm in each of said first and second positions.
4. The hanger support assembly of Claim 1 wherein said hanger retaining means comprises a plurality of hanger retaining members mounted on an upper portion and a lower portion of said frame.
5. The hanger support assembly of Claim 4 wherein said hanger retaining members comprise resilient C-shaped clips.
6. The hanger support assembly of Claim 5 wherein said frame is formed of a plastic material.
7. The hanger support assembly of Claim 1 wherein said frame further includes a plurality of guide members extending upwardly therefrom, said guide members being designed to engage a clothesline.
8. A frame suitable for use with clothes hangers and designed to operate in conjunction with a clothesline, the frame having a body with apertures extending therethrough, a plurality of hanger retaining members mounted on an upper portion and a lower portion of said frame, and a plurality of guide members on an upper portion of said frame, each of said guide members being designed to fit over a clothesline and be retained thereby.
